#### **CD38 Human Recombinant Protein**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Human CD38 Protein (C-His-Avi)

Species: Human Expression Host: HEK293

**Expression cDNA Clone** 

Val43-Ile300

or AA Sequence:

Tag: C-His-Avi

**Predicted MW:** The protein has a predicted molecular weight of 33 kDa and migrates at approximately 35-45

kDa on SDS-PAGE with DTT-reduced conditions.

Concentration: 25µg size is bottled at 0.2mg/mL concentration. 100 µg size is bottled at lot specific

concentration.

**Purity:** >90%

**Buffer:** 1xPBS buffer, pH7.4

**Bioactivity:** Positive

The definition of the active protein (purified and biotinylated) is defined as the protein that can bind to its biological receptor/ligand. For conjugated protein, it is defined with its function

to bind to the ScFv of the active CAR-transfected cells in flow cytometry test.

**Preparation:** Affinity Ni-NTA

**Applications:** ELISA

**Storage:** An unopened vial can be stored at 4°C for 2 weeks or at -20°C and below for six months. This

stock solution should be aliquoted and stored at  $\leq$  -70°C to minimize the freeze/thaw cycles.

**Stability:** 6 Months

RefSeq: <u>NP 001766.2</u>

Locus ID: 952

UniProt ID: P28907

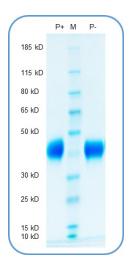

#### Summary:

Cluster of differentiation 38 (CD38) is also known as ADP-ribosyl cyclase 1, which belongs to the ADP-ribosyl cyclase family. CD38 is expressed in many immune cells including B cells, T lymphocytes, and NK cells. CD38 is expressed at high levels in some organs like pancreas, liver, kidney, brain, testis, ovary. CD38 can function as either a cell surface receptor or as an enzyme. As the receptor, CD38 can activate T cells and promote cytokine production. As the multifunctional enzyme, CD38 can regulating calcium mediated signal transduction through the production of cyclic ADP-ribose (cADPR) in many types of cells. Clinically, elevated CD38 expression is prognostic marker in chronic lymphocytic leukemia.

# **Product images:**

Recombinant Human CD38 protein (C-His-Avi) on SDS-PAGE under reducing condition P(+) and non-reducing condition P(-). The purity of this protein appears to be greater than 95% based on Coomassie-blue staining.
