## **Human CCR2 Protein, hFc Tag**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Human CCR2 Protein, hFc Tag

**Expression Host:** HEK293

Tag: C-Human Fc

**Predicted MW:** The protein has a predicted molecular mass of 31.0 kDa after removal of the signal

peptide. The apparent molecular mass of CCR2-hFc is approximately 35-55 kDa due to

glycosylation.

**Purity:** The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

**Reconstitution Method:** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Storage: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

Stability: 12 months from date of despatch

Summary: The protein encoded by this gene is a receptor for monocyte chemoattractant protein-1, a

chemokine which specifically mediates monocyte chemotaxis. Monocyte chemoattractant protein-1 is involved in monocyte infiltration in inflammatory diseases such as rheumatoid arthritis as well as in the inflammatory response against tumors. The encoded protein mediates agonist-dependent calcium mobilization and inhibition of adenylyl cyclase. This protein can also be a coreceptor with CD4 for HIV-1 infection. This gene is located in the chemokine receptor gene cluster region of chromosome 3. [provided by RefSeq, Aug 2017]
