

Product datasheet for TP724090

Human FOLR2 Protein, mFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human FOLR2 Protein, mFc Tag

Expression Host: HEK293

Tag: C-mouse Fc

Predicted MW: The protein has a predicted molecular mass of 50.7 kDa after removal of the signal

peptide. The apparent molecular mass of FOLR2-mFc is approximately 35-55 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

12 months from date of despatch Stability:

BETA-HFR; FBP; FBP/PL-1; FOLR1; FR-BETA; FR-P3; FRbeta Synonyms:

Summary: The protein encoded by this gene is a member of the folate receptor (FOLR) family, and these

> genes exist in a cluster on chromosome 11. Members of this gene family have a high affinity for folic acid and for several reduced folic acid derivatives, and they mediate delivery of 5methyltetrahydrofolate to the interior of cells. This protein has a 68% and 79% sequence homology with the FOLR1 and FOLR3 proteins, respectively. Although this protein was originally thought to be specific to placenta, it can also exist in other tissues, and it may play a

role in the transport of methotrexate in synovial macrophages in rheumatoid arthritis

patients. Multiple transcript variants that encode the same protein have been found for this

gene. [provided by RefSeq, Jul 2008]
