## Human FN1 Protein, His Tag

## Product data:

Product Type: Recombinant Proteins

Description:
Expression Host:
Tag:
Predicted MW:
Purity:

Reconstitution Method:

Storage:

Stability:
Summary:

Human FN1 Protein, His Tag
HEK293
C- $6 \times \mathrm{His}$
The protein has a predicted molecular mass of 270.1 kDa after removal of the signal peptide.
The purity of the protein is greater than $85 \%$ as determined by SDS-PAGE and Coomassie blue staining.
Lyophilized from sterile PBS, pH 7.4. Normally $5 \%-8 \%$ trehalose is added as protectants before lyophilization.
Store at $-20^{\circ} \mathrm{C}$ to $-80^{\circ} \mathrm{C}$ for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at $-80^{\circ} \mathrm{C}$ (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
12 months from date of despatch
This gene encodes fibronectin, a glycoprotein present in a soluble dimeric form in plasma, and in a dimeric or multimeric form at the cell surface and in extracellular matrix. The encoded preproprotein is proteolytically processed to generate the mature protein. Fibronectin is involved in cell adhesion and migration processes including embryogenesis, wound healing, blood coagulation, host defense, and metastasis. The gene has three regions subject to alternative splicing, with the potential to produce 20 different transcript variants, at least one of which encodes an isoform that undergoes proteolytic processing. The full-length nature of some variants has not been determined. [provided by RefSeq, Jan 2016]
