

Product datasheet for TP724165

Human JAM-A Protein, hFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human JAM-A Protein, hFc Tag

Expression Host: HEK293

Tag: C-Human Fc

Predicted MW: The protein has a predicted molecular mass of 49.1 kDa after removal of the signal

peptide. The apparent molecular mass of JAM-A-hFc is approximately 55-70 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

12 months from date of despatch Stability:

CD3210 JAM0 JAM10 JAMA0 JCAM0 KAT0 PAM-1 Synonyms:

Summary: Tight junctions represent one mode of cell-to-cell adhesion in epithelial or endothelial cell

> sheets, forming continuous seals around cells and serving as a physical barrier to prevent solutes and water from passing freely through the paracellular space. The protein encoded by this immunoglobulin superfamily gene member is an important regulator of tight junction assembly in epithelia. In addition, the encoded protein can act as (1) a receptor for reovirus, (2) a ligand for the integrin LFA1, involved in leukocyte transmigration, and (3) a platelet receptor. Multiple 5' alternatively spliced variants, encoding the same protein, have been

identified but their biological validity has not been established.
