

Product datasheet for TP724175

Human NKG2A Protein, hFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human NKG2A Protein, hFc Tag

Expression Host: HFK293

Tag: N-Human Fc

Predicted MW: The protein has a predicted molecular mass of 42.2 kDa after removal of the signal

peptide. The apparent molecular mass of hFc-NKG2A is approximately 35-55 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

12 months from date of despatch Stability:

Synonyms: CD159A, NKG2, NKG2A

Summary: Natural killer (NK) cells are lymphocytes that can mediate lysis of certain tumor cells and

> virus-infected cells without previous activation. They can also regulate specific humoral and cell-mediated immunity. The protein encoded by this gene belongs to the killer cell lectin-like

receptor family, also called NKG2 family, which is a group of transmembrane proteins preferentially expressed in NK cells. This family of proteins is characterized by the type II membrane orientation and the presence of a C-type lectin domain. This protein forms a complex with another family member, KLRD1/CD94, and has been implicated in the recognition of the MHC class I HLA-E molecules in NK cells. The genes of NKG2 family members form a killer cell lectin-like receptor gene cluster on chromosome 12. Multiple alternatively spliced transcript variants encoding distinct isoforms have been observed.
