Human IL21R Protein, mFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human IL21R Protein, mFc Tag

Expression Host: HEK293

Tag: C-Mouse Fc

Predicted MW: The protein has a predicted molecular mass of 50.7 kDa after removal of the signal

peptide. The apparent molecular mass of IL21R-mFc is approximately 55-70 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Storage: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

Stability: 12 months from date of despatch

Synonyms: CD360, IMD56, NILR

Summary: The protein encoded by this gene is a cytokine receptor for interleukin 21 (IL21). It belongs to

the type I cytokine receptors, and has been shown to form a heterodimeric receptor complex

with the common gamma-chain, a receptor subunit also shared by the receptors for

interleukin 2, 4, 7, 9, and 15. This receptor transduces the growth promoting signal of IL21, and is important for the proliferation and differentiation of T cells, B cells, and natural killer (NK) cells. The ligand binding of this receptor leads to the activation of multiple downstream signaling molecules, including JAK1, JAK3, STAT1, and STAT3. Knockout studies of a similar gene in mouse suggest a role for this gene in regulating immunoglobulin production. Three

alternatively spliced transcript variants have been described.
