

## Product datasheet for TP724190

## **Human UPA Protein, His Tag**

**Product data:** 

**Product Type: Recombinant Proteins** 

**Description:** Human UPA Protein, His Tag

**Expression Host: HEK293** Tag: C-6×His

**Predicted MW:** The protein has a predicted molecular mass of 47.2 kDa after removal of the signal peptide.

The apparent molecular mass of UPA-His is approximately 55-70 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie **Purity:** 

blue staining.

**Reconstitution Method:** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

Stability: 12 months from date of despatch Synonyms: ATF, BDPLT5, QPD, u-PA, UPA, URK

Summary: This gene encodes a secreted serine protease that converts plasminogen to plasmin. The

> encoded preproprotein is proteolytically processed to generate A and B polypeptide chains. These chains associate via a single disulfide bond to form the catalytically inactive high

molecular weight urokinase-type plasminogen activator (HMW-uPA). HMW-uPA can be further processed into the catalytically active low molecular weight urokinase-type plasminogen activator (LMW-uPA). This low molecular weight form does not bind to the urokinase-type plasminogen activator receptor. Mutations in this gene may be associated with Quebec platelet disorder and late-onset Alzheimer's disease. Alternative splicing results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed.
