## Human FZD4 Protein, hFc Tag

## Product data:

Product Type: Recombinant Proteins
Description:
Expression Host:
Human FZD4 Protein, hFc Tag
HEK293
Tag:
Predicted MW:
C-Human Fc
The protein has a predicted molecular mass of 42.4 kDa after removal of the signal peptide. The apparent molecular mass of FZD4-hFc is approximately 55-70 kDa due to glycosylation.
Purity: $\quad$ The purity of the protein is greater than $95 \%$ as determined by SDS-PAGE and Coomassie blue staining.
Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally $5 \%-8 \%$ trehalose is added as protectants before lyophilization.
Storage: Store at $-20^{\circ} \mathrm{C}$ to $-80^{\circ} \mathrm{C}$ for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at $-80^{\circ} \mathrm{C}$ (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Stability:
Summary:
This gene is a member of the frizzled gene family. Members of this family encode seventransmembrane domain proteins that are receptors for the Wingless type MMTV integration site family of signaling proteins. Most frizzled receptors are coupled to the beta-catenin canonical signaling pathway. This protein may play a role as a positive regulator of the Wingless type MMTV integration site signaling pathway. A transcript variant retaining intronic sequence and encoding a shorter isoform has been described, however, its expression is not supported by other experimental evidence. [provided by RefSeq, Jul 2008]
