## Product datasheet for TP724226

## Human KCNK9 Protein, hFc Tag

## **Product data:**

| Product Type:          | Recombinant Proteins  |
|------------------------|---|
| Description:           | Human KCNK9 Protein, hFc Tag  |
| Expression Host:       | HEK293  |
| Tag:                   | C-Human Fc  |
| Predicted MW:          | The protein has a predicted molecular mass of 32.2 kDa after removal of the signal peptide.<br>The apparent molecular mass of KCNK9-hFc is approximately 35-55 kDa due to glycosylation.  |
| Purity:                | The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie<br>blue staining.   |
| Reconstitution Method: | Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants<br>before lyophilization.   |
| Storage:               | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.   |
| Stability:             | 12 months from date of despatch   |
| Summary:               | This gene encodes a protein that contains multiple transmembrane regions and two pore-<br>forming P domains and functions as a pH-dependent potassium channel. Amplification and<br>overexpression of this gene have been observed in several types of human carcinomas. This<br>gene is imprinted in the brain, with preferential expression from the maternal allele. A<br>mutation in this gene was associated with Birk-Barel dysmorphism syndrome. Alternative<br>splicing results in multiple transcript variants. [provided by RefSeq, Jul 2017] |
