

Product datasheet for TP724271

Human CD235A Protein, hFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human CD235A Protein, hFc Tag

Expression Host: HFK293

Tag: C-Human Fc

Predicted MW: The protein has a predicted molecular mass of 33.3 kDa after removal of the signal peptide.

The apparent molecular mass of CD235A-hFc is approximately 35-55 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended Storage:

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

12 months from date of despatch Stability:

Summary: Glycophorins A (GYPA) and B (GYPB) are major sialoglycoproteins of the human erythrocyte

> membrane which bear the antigenic determinants for the MN and Ss blood groups. In addition to the M or N and S or s antigens that commonly occur in all populations, about 40 related variant phenotypes have been identified. These variants include all the variants of the Miltenberger complex and several isoforms of Sta, as well as Dantu, Sat, He, Mg, and deletion

variants Ena, S-s-U- and Mk. Most of the variants are the result of gene recombinations

between GYPA and GYPB. [provided by RefSeq, Jul 2008]
