## **Human PRNP Protein, hFc Tag**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Human PRNP Protein, hFc Tag

**Expression Host:** HEK293

Tag: C-Human Fc

**Predicted MW:** The protein has a predicted molecular mass of 48.8 kDa after removal of the signal peptide.

The apparent molecular mass of PRNP-hFc is approximately 55-70 kDa due to glycosylation.

**Purity:** The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

**Reconstitution Method:** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Storage: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

**Stability:** 12 months from date of despatch

**Synonyms:** PrP, ASCR, PrP27-30, PrP33-35C, CD230

**Summary:** The protein encoded by this gene is a membrane glycosylphosphatidylinositol-anchored

glycoprotein that tends to aggregate into rod-like structures. The encoded protein contains a

highly unstable region of five tandem octapeptide repeats. This gene is found on

chromosome 20, approximately 20 kbp upstream of a gene which encodes a biochemically and structurally similar protein to the one encoded by this gene. Mutations in the repeat region as well as elsewhere in this gene have been associated with Creutzfeldt-Jakob disease, fatal familial insomnia, Gerstmann-Straussler disease, Huntington disease-like 1, and kuru. An

overlapping open reading frame has been found for this gene that encodes a smaller, structurally unrelated protein, AltPrp. Alternative splicing results in multiple transcript

variants. [provided by RefSeq, Nov 2014]
