## Mouse B7-2 Protein, hFc Tag

## Product data:

Product Type: Recombinant Proteins

Description:
Expression Host:
Tag:
Predicted MW:

Purity:

Reconstitution Method:

Storage:

Stability:
Summary:

Mouse B7-2 Protein, hFc Tag
HEK293
C-Human Fc
The protein has a predicted molecular mass of 51.4 kDa after removal of the signal peptide. The apparent molecular mass of mB7-2-hFc is approximately $55-70 \mathrm{kDa}$ due to glycosylation.
The purity of the protein is greater than $95 \%$ as determined by SDS-PAGE and Coomassie blue staining.
Lyophilized from sterile PBS, pH 7.4. Normally 5 \% - 8\% trehalose is added as protectants before lyophilization.
Store at $-20^{\circ} \mathrm{C}$ to $-80^{\circ} \mathrm{C}$ for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at $-80^{\circ} \mathrm{C}$ (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
12 months from date of despatch
This gene encodes a type I membrane protein that is a member of the immunoglobulin superfamily. This protein is expressed by antigen-presenting cells, and it is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of this protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of this protein with cytotoxic T-lymphocyte-associated protein 4 negatively regulates T -cell activation and diminishes the immune response. Alternative splicing results in several transcript variants encoding different isoforms.
