Human IL13(35-146) Protein, hFc Tag

Product data:

Product Type: Recombinant Proteins

Description: Human IL13(35-146) Protein, hFc Tag

Expression Host: HEK293

Tag: C-Human Fc

Predicted MW: The protein has a predicted molecular mass of 38.4 kDa after removal of the signal peptide.

The apparent molecular mass of IL13(35-146)-hFc is approximately 33-53 kDa due to

glycosylation.

Purity: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie

blue staining.

Reconstitution Method: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants

before lyophilization.

Storage: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.

Stability: 12 months from date of despatch

Summary: This gene encodes an immunoregulatory cytokine produced primarily by activated Th2 cells.

This cytokine is involved in several stages of B-cell maturation and differentiation. It upregulates CD23 and MHC class II expression, and promotes IgE isotype switching of B cells. This cytokine down-regulates macrophage activity, thereby inhibits the production of pro-

inflammatory cytokines and chemokines. This cytokine is found to be critical to the

pathogenesis of allergen-induced asthma but operates through mechanisms independent of

IgE and eosinophils. This gene, IL3, IL5, IL4, and CSF2 form a cytokine gene cluster on chromosome 5q, with this gene particularly close to IL4. [provided by RefSeq, Jul 2008]
