<b>Summary:</b>	CD99-L2, also known as CD99 antigen-like protein 2, belongs to the CD99 family. It is endothelial surface protein involved in neutrophil extravasation and was expressed at the borders between transfected cells. It display a role in the migration of leukocytes across endothelial cells of inflammation, and play other roles in thymocyte development. It could trigger homotypic cell aggregation by stimulating other adhesion molecules or effects on the membrane underlying cytoskeleton. Recombinant mouse CD99-L2, fused to hlgG-His-tag at C-terminus, was expressed in HEK293 cell and purified by using conventional chromatography techniques.
