

Product datasheet for TP726646

Fgf21 Mouse Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant Mouse FGF-21 (C-6His)

Species: Mouse

Expression cDNA Clone

or AA Sequence:

Ala29-Ser210

Tag: C-6His

Lyophilized from a 0.2 um filtered solution of 20mM Tris-HCl, 100mM NaCl, pH 9.0. **Buffer:**

Recombinant Mouse Fibroblast Growth Factor 21 is produced by our Mammalian expression Note:

system and the target gene encoding Ala29-Ser210 is expressed with a 6His tag at the C-

terminus.

Stability: 12 months from date of despatch

Locus ID: 56636 **UniProt ID:** Q9JJN1

Summary: Fibroblast Growth Factor 21 (FGF21) is a growth factor that belongs to the FGF family. FGF

> family proteins play a central role during prenatal development and postnatal growth and regeneration of mamy tissues, by promoting cellular proliferation and differentiation. FGF21 is a potent activator of glucose uptake on adipocytes, protects animal from diet-induced obesity when overexpression in transgenic mice, and lower blood glucose and triglyceride levels when therapeutically adiministered to diabetic redents. FGF21 is produced by hepatocytes in reponse to free fatty acid stimulation of a PPARa/RXR dimeric complex. This situation occurs clinically during starvation, or following the ingestionof a highly-fat/low-

acids from triglyceride stores. Once free fatty acid reach hepatocytes, they are oxidized and reduced to acetyl-CoA. The acetyl-CoA is recombined into 4-carbon ketone bodies, release, and transported to peripheral tissue for TCA processing and energy generation.

carbohydrate diet. Upon FGF21 secretion, white adipose tissue is induced to release free fatty
