## **EGFR Human Recombinant Protein**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant Human Epidermal Growth Factor (V30G, Del31-297)/ErbB1/HER1 (C-Fc)

Species: Human

**Expression cDNA Clone** 

or AA Sequence:

Leu25-Val30Gly&Asn298-Ser645

Tag: C-Fc

Buffer: Lyophilized from a 0.2 um filtered solution of PBS, pH 7.4.

Note: Recombinant Human Epidermal Growth Factor Receptor/Receptor Tyrosine Protein Kinase

ErbB1 is produced by our Mammalian expression system and the target gene encoding

Leu25-Ser378 is expressed with a Fc tag at the C-terminus.

Stability: 12 months from date of despatch

**RefSeq:** NP 001333870

**Locus ID:** 1956 **UniProt ID:** P00533

**Summary:** The EGFR subfamily of receptor tyrosine kinases is composed of EGFR, ErbB2, ErbB3 and

ErbB4. The EGFR shares 43% - 44% aa sequence identity with the ECD of human EGFR subfamily. All these family members are type I transmembrane glycoproteins with an

extracellular ligand binding domain. The extracellular ligand binding domain is containing two cysteine-rich domains separated by a spacer region and a cytoplasmic domain containing a

membrane-proximal tyrosine kinase domain. Ligand binding could induce EGFR homodimerization and heterodimerization with ErbB2, resulting in cell signaling, heterodimerization tyrosine phosphorylation and kinase activation. It can bind EGF, amphiregulin, TGF-alpha, betacellulin, epiregulin, HB-EGF, epigen, and so on. Its signaling regulates multiple biological functions including cell proliferation, differentiation, motility, and apoptosis. EGFR can also be recruited to form heterodimers with the ligand-activated ErbB3

or ErbB4. EGFR is overexpressed in different tumors. Several anti-cancer drugs use EGFR as

target.
