

## **Product datasheet for TP727851**

## Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant Human TIM-3 (C-mFc)

Species: Human

**Expression cDNA Clone** 

or AA Sequence:

Ser22-Arg200

Tag: C-mFc

**Buffer:** Lyophilized from a 0.2 um filtered solution of PBS, pH 7.4.

**Note:** Recombinant Human T-Cell Membrane Protein 3 is produced by our Mammalian expression

system and the target gene encoding Ser22-Arg200 is expressed with a mFc tag at the C-

terminus.

**Stability:** 12 months from date of despatch

**Summary:** Hepatitis A virus cellular receptor 2 (HAVCR2) is a single-pass type I membrane protein and it

contains 1 Ig-like V-type (immunoglobulin-like) domain. The protein belongs to the

immunoglobulin superfamily, and TIM family of proteins. The protein regulates macrophage activation. It inhibits T-helper type 1 lymphocyte (Th1)-mediated auto- and alloimmune responses and promotes immunological tolerance. It may be also involved in T-cell homing and it is receptor for LGALS9. CD4 (MIM 186940)-positive T helper lymphocytes can be divided into types 1 (Th1) and 2 (Th2) on the basis of their cytokine secretion patterns. Th1 cells and their associated cytokines are involved in cell-mediated immunity to intracellular pathogens and delayed-type hypersensitivity reactions, whereas Th2 cells are involved in the control of extracellular helminthic infections and the promotion of atopic and allergic diseases. The 2 types of cells also cross-regulate the functions of the other. TIM3 is a Th1-specific cell surface protein that regulates macrophage activation and enhances the severity of experimental

autoimmune encephalomyelitis in mice.
