## **SARS-CoV-2 Recombinant Protein**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant S Protein RBD(Mammalian, C-mFc) V2

**Species:** SARS-CoV-2

Expression cDNA Clone

or AA Sequence:

Arg319-Phe541

Tag: C-mFc

**Buffer:** Supplied as a 0.2 μm filtered solution of PBS, pH 7.4.

**Note:** Recombinant 2019-nCoV S protein RBD Protein is produced by our Mammalian expression

system and the target gene encoding Arg319-Phe541 is expressed with a mFc tag at the C-

terminus.

Storage: Store at ≤-70°C, stable for 6 months after receipt. Store at ≤-70°C, stable for 3 months under

sterile conditions after opening. Please minimize freeze-thaw cycles.

**Stability:** 12 months from date of despatch

Synonyms: 2019-nCov RBD Protein; 2019-nCoV Spike RBD Protein

**Summary:** The spike (S) glycoprotein of coronaviruses is known to be essential in the binding of the virus

to the host cell at the advent of the infection process. Most notable is severe acute

respiratory syndrome (SARS). The severe acute respiratory syndrome-coronavirus (SARS-CoV) spike (S) glycoprotein alone can mediate the membrane fusion required for virus entry and cell fusion. It is also a major immunogen and a target for entry inhibitors. It's been reported that 2019-nCoV can infect the human respiratory epithelial cells through interaction with the human ACE2 receptor. The spike protein is a large type I transmembrane protein containing two subunits, S1 and S2. S1 mainly contains a receptor binding domain (RBD), which is responsible for recognizing the cell surface receptor. S2 contains basic elements needed for

the membrane fusion. The S protein plays key parts in the induction of neutralizing-antibody

and T-cell responses, as well as protective immunity.
