Product Type:	Recombinant Proteins
Description:	Recombinant Galectin-7, Human
Species:	Human
Expression Host:	E. coli
Expression cDNA Clone or AA Sequence:	SNVPHKSSLPEGIRPGTVLRIRGLVPPNASRFHVNLLCGEEQGSDAALHFNPRLDTSEVVFNSKEQGSWG REERGPGVPFQRGQPFEVLIIASDDGFKAVVGDAQYHHFRHRLPLARVRLVEVGGDVQLDSVRIF with polyhistidine tag at the N-terminus.
Tag:	His Tag (N-term)
Predicted MW:	The protein has a calculated MW of 15.9 kDa. The protein migrates as 18 kDa under reducing condition (SDS-PAGE analysis).
Purity:	>98% as determined by SDS-PAGE.
Buffer:	The protein was lyophilized from a 0.2 $\mu m$ filtered solution containing 1X PBS, pH 7.4.
Bioactivity:	Measured by its ability to agglutinate human red blood cells. The ED₅₀ for this effect is <2 µg/mL.
Endotoxin:	<0.1 EU per 1 $\mu$ g of the protein by the LAL method.
Reconstitution Method:	Centrifuge at 3000 rpm for 5 mins before opening. It is recommended to reconstitute the lyophilized protein in sterile H <sub>2</sub> O to a concentration not less than 100 µg/mL and incubate the stock solution at room temperature for at least 20 mins to ensure sufficient re-dissolved. Do Not Vortex! Vigorous shaking may impair the biological activity of the protein.
Applications:	Cell culture
Storage:	Lyophilized protein should be stored at -20°C for 1 year. Upon reconstitution, store at 2°C to 8°C for up to 1 week. Further dilute in a buffer containing a carrier protein or stabilizer (e.g. 0.1% BSA, 10%FBS, 5%HSA or 5% trehalose solution), protein aliquots should be stored at - 20°C or -80°C for 3-6 months. Avoid repeated freeze/thaw cycles.
UniProt ID:	<u>P47929</u>
Synonyms:	LGALS7B, LGALS7, PI7; GAL7, Gal-7, HKL-14

## **CRIGENE** Recombinant Galectin-7, Human – TP728216S

Summary:Galectin-7 (Gal-7) is a lectin family member and is one of the prototype galectins. It contains<br/>one carbohydrate recognition domain (CRD), responsible for β-galactoside binding, and is<br/>biologically active as homodimers. Galectin-7 is constitutively presented in the<br/>gastrointestinal tract, stratified epithelia, skin, and fetal heart. It has been reported that<br/>galectin-7 serves as an effector in triggering apoptosis following activation of the p53<br/>pathway. Furthermore, it serves important functions in numerous biological activities<br/>including cell adhesion, migration, proliferation, and differentiation.
