

Product datasheet for TP728225M

Recombinant HMGB1, Human (mammalian cell expression)

Product data:

Product Type: Recombinant Proteins Description: Recombinant HMGB1, Human (mammalian cell expression) Species: Human **HEK293 Expression Host:** Expression cDNA Clone MGKGDPKKPRGKMSSYAFFVQTCREEHKKKHPDASVNFSEFSKKCSERWKTMSAKEKGKFEDMAKADK or AA Sequence: ARYEREMKTYIPPKGETKKKFKD PNAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLKEKYEKDIAAY RAKGKPDAAKKGVVKAEKSKK KKEEEEDEEDEEDEEDEEDEEDEEDEDEDEDEDEDDDDE with polyhistidine-SUMO tag at the N-terminus His-SUMO Tag (N-term) Tag: Predicted MW: The protein has a calculated MW of 36.42 kDa. The protein migrates as 35-48 kDa under reducing condition (SDS-PAGE analysis). **Purity:** >98% as determined by SDS-PAGE. **Buffer:** The protein was lyophilized from a 0.2 µm filtered solution containing 1X PBS, pH 7.4. Measure by its ability to induce TNF alpha in RAW264.7 cells. The ED₅₀ for this effect is <10 **Bioactivity:** µg/mL. Endotoxin: <0.1 EU per 1 μ g of the protein by the LAL method. **Reconstitution Method:** Centrifuge at 3000 rpm for 5 mins before opening. It is recommended to reconstitute the lyophilized protein in sterile H₂O to a concentration not less than 100 µg/mL and incubate the stock solution at room temperature for at least 20 mins to ensure sufficient re-dissolved. Do Not Vortex! Vigorous shaking may impair the biological activity of the protein. **Applications:** Cell culture Storage: Lyophilized protein should be stored at -20°C for 1 year. Upon reconstitution, store at 2°C to 8°C for up to 1 week. Further dilute in a buffer containing a carrier protein or stabilizer (e.g. 0.1% BSA, 10%FBS, 5%HSA or 5% trehalose solution), protein aliguots should be stored at -20°C or -80°C for 3-6 months. Avoid repeated freeze/thaw cycles. **UniProt ID:** P09429 HMG-1, HMG1, HMG3, SBP-1 Synonyms:

CRIGENE Recombinant HMGB1, Human (mammalian cell expression) – TP728225M

Summary:High mobility group protein B1 protein (HMGB1) is the high mobility group box family of non-
histone chromosomal proteins. Human HMGB1 is expressed as a 25 kDa single chain
polypeptide containing three domains: two N-terminal HMG boxes A and B, and a negatively
charged 30 a.a. C-terminal region that contains only Asp and Glu. Post-translational
modification on HMGB1 have been reported, affects its localization, receptor interactions,
and function. HMGB1, with a disulfide bond between C23 and C45, have been reported that
cause cytokine production and the activation of NF-κB. Otherwise, the fully oxidized form has
no immune function, losing its proinflammatory effect and the apoptotic cell death activation
function.
