## Recombinant IGF-II (Insulin-like growth factor-II), Human

#### **Product data:**

**Product Type:** Recombinant Proteins

**Description:** Recombinant IGF-II (Insulin-like growth factor-II), Human

Species: Human
Expression Host: E. coli

**Expression cDNA Clone** 

or AA Sequence:

 $A YRPSETLCGGELVDTLQFVCGDRGFYFSRPASRVSRRSRGIVE ECCFRSCDLALLETYCATPAKSE\ with$ 

polyhistidine tag at the N-terminus.

Tag: His Tag (N-term)

**Predicted MW:** The protein has a calculated MW of 8.28 kDa. The protein migrates as 11 kDa under reducing

condition (SDS-PAGE analysis).

**Purity:** >98% as determined by SDS-PAGE.

Buffer: The protein was lyophilized from a 0.2 μm filtered solution containing 1X PBS, pH 8.0.

**Bioactivity:** Measure by its ability to induce MCF-7 cells proliferation. The ED $_{50}$  for this effect is <3 ng/mL.

The specific activity of recombinant human IGF-II is  $> 3x \cdot 10^5$  IU/mg.

**Endotoxin:**  $< 0.1 \; EU \; per \; 1 \; \mu g \; of \; the \; protein \; by \; the \; LAL \; method.$ 

**Reconstitution Method:** Centrifuge at 3000 rpm for 5 mins before opening. It is recommended to reconstitute the

lyophilized protein in sterile  $H_2O$  to a concentration not less than 100 µg/mL and incubate the stock solution at room temperature for at least 20 mins to ensure sufficient re-dissolved.

Do Not Vortex! Vigorous shaking may impair the biological activity of the protein.

**Applications:** Cell culture

Storage: Lyophilized protein should be stored at -20°C for 1 year. Upon reconstitution, store at 2°C to

8°C for up to 1 week. Further dilute in a buffer containing a carrier protein or stabilizer (e.g. 0.1% BSA, 10%FBS, 5%HSA or 5% trehalose solution), protein aliquots should be stored at -

20°C or -80°C for 3-6 months. Avoid repeated freeze/thaw cycles.

UniProt ID: P01344

Synonyms: Somatamedin A

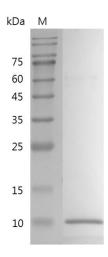

### **Summary:**

Insulin like Growth Factors 2 (IGF-II) is a 7.48 kDa member of the Insulin-like Growth Factors with 67 amino acid residues. IGF-II is mainly expressed from placenta, extravillous trophoblasts, leydig cells, syncytiotrophoblasts, cytotrophoblasts, peritubular cells. IGF-II regulating fetoplacental development and tissue differentiation. In adults, IGF-II signaling involves glucose metabolism in adipose tissue, skeletal muscle and liver. It also has important implications for metabolic disorders and cancer.
