# Product datasheet for TP728372S

### Recombinant TNF alpha (Tumor necrosis factor alpha), Mouse

### **Product data:**

Product Type:	Recombinant Proteins
Description:	Recombinant TNF alpha (Tumor necrosis factor alpha), Mouse
Species:	Mouse
Expression Host:	E. coli
Expression cDNA Clone or AA Sequence:	MLRSSSQNSSDKPVAHVVANHQVEEQLEWLSQRANALLANGMDLKDNQLVVPADGLYLVYSQVLFKG QGCPDYVLLTHTVSRFAISYQEKVNLLSAVKSPCPKDTPEGAELKPWYEPIYLGGVFQLEKGDQLSAEVNLP KYL DFAESGQVYFGVIAL with polyhistidine tag at the C-terminus.
Tag:	His Tag (C-term)
Predicted MW:	The protein has a calculated MW of 18.2 kDa. The protein migrates as 16 kDa under reducing condition (SDS-PAGE analysis).
Purity:	>98% as determined by SDS-PAGE.
Buffer:	The protein was lyophilized from a 0.2 $\mu m$ filtered solution containing 1X PBS, pH 8.0.
Bioactivity:	Measure by its ability to induce cytotoxicity in L929 cells in the presence of actinomycin D. The ED <sub>50</sub> for this effect is <40 pg/mL. The specific activity of recombinant mouse TNF alpha is approximately >2.5x 10 <sup>7</sup> IU/mg.
Endotoxin:	<0.1 EU per 1 $\mu$ g of the protein by the LAL method.
Reconstitution Method:	Centrifuge at 3000 rpm for 5 mins before opening. It is recommended to reconstitute the lyophilized protein in sterile $H_2O$ to a concentration not less than 100 µg/mL and incubate the stock solution at room temperature for at least 20 mins to ensure sufficient re-dissolved. Do Not Vortex! Vigorous shaking may impair the biological activity of the protein.
Applications:	Cell culture
Storage:	Lyophilized protein should be stored at -20°C for 1 year. Upon reconstitution, store at 2°C to 8°C for up to 1 week. Further dilute in a buffer containing a carrier protein or stabilizer (e.g. 0.1% BSA, 10%FBS, 5%HSA or 5% trehalose solution), protein aliquots should be stored at - 20°C or -80°C for 3-6 months. Avoid repeated freeze/thaw cycles.
UniProt ID:	<u>P06804</u>
Synonyms:	TNFSF2, Cachectin, Differentiation-inducing factor (DIF), Necrosin, Cytotoxin, TNSF1A, TNF-a

Summary:Tumor necrosis factor alpha (TNF alpha) stimulates the acute phase of the immune response.<br/>In response to a pathogen, TNF alpha is one of the first to be released and can apply its<br/>effects in many organs. TNF alpha stimulates the release of corticotropic releasing hormone,<br/>suppresses appetite, and induces fever, in the hypothalamus. TNF increase vasodilation and<br/>loss of vascular permeability, it helps recruit lymphocyte, neutrophil, and monocyte to the<br/>inflammation site by regulating chemokine release.
