

# Product datasheet for TP750001

## FGF1 (NM\_000800) Human Recombinant Protein

### **Product data:**

#### **Product Type: Recombinant Proteins** Recombinant protein of human Fibroblast Growth Factor-acidic (FGF1) produced in E. coli **Description:** Species: Human E. coli **Expression Host: Expression cDNA Clone** A DNA sequence encoding the region (Phe16-Asp155) of human FGF1 or AA Sequence: Tag: Tag Free Predicted MW: 15.9 kDa **Concentration:** Resuspend the protein to the desired concentration in proper buffer. **Purity:** >95% as determined by SDS-PAGE and Coomassie blue staining **Buffer:** Lyophilized from a sterile solution containing 50 mM Tris-HCl, pH 7.5, 150 mM NaCl Measured in a cell proliferation assay using 3T3 cells. ED50 for this effect is typically 0.031 -**Bioactivity:** 0.046 ng/ml. Endotoxin: < 0.1 EU per 1 µg of the protein by the LAL Note: For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process. Store at -80°C. Storage: Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles. **RefSeq:** NP 000791 Locus ID: 2246 **UniProt ID:** P05230 **RefSeq Size:** 4162 Cytogenetics: 5q31.3 **RefSeq ORF:** 465 Synonyms: AFGF; ECGF; ECGF-beta; ECGFA; ECGFB; FGF-1; FGF-alpha; FGFA; GLIO703; HBGF-1; HBGF1

	FGF1 (NM_000800) Human Recombinant Protein – TP750001
Summary:	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is thought to be involved in organogenesis. Multiple alternatively spliced variants encoding different isoforms have been described. [provided by RefSeq, Jan 2009]
Protein Families:	Druggable Genome, Secreted Protein
Protein Pathway	s: MAPK signaling pathway, Melanoma, Pathways in cancer, Regulation of actin cytoskeleton
