#### Trypsin (PRSS3) (NM\_001197098) Human Recombinant Protein - TP761093

Summary: This gene encodes a trypsinogen, which is a member of the trypsin family of serine

proteases. This enzyme is expressed in the brain and pancreas and is resistant to common trypsin inhibitors. It is active on peptide linkages involving the carboxyl group of lysine or arginine. This gene is localized to the locus of T cell receptor beta variable orphans on chromosome 9. Four transcript variants encoding different isoforms have been described for

this gene. [provided by RefSeq, Oct 2010]

**Protein Families:** Druggable Genome, Protease, Secreted Protein

**Protein Pathways:** Neuroactive ligand-receptor interaction
