GRIGENE RSPO3 (NM_032784) Human Recombinant Protein – TP762635

Summary:This gene belongs to the R-spondin family. The encoded protein plays a role in the regulation
of Wnt (wingless-type MMTV integration site family)/beta-catenin and Wnt/planar cell polarity
(PCP) signaling pathways, which are involved in development, cell growth and disease
pathogenesis. Genome-wide association studies suggest a correlation of this gene with bone
mineral density and risk of fracture. This gene may be involved in tumor development.
