

Product datasheet for **TR300902**

GIGYF2 Human shRNA Plasmid Kit (Locus ID 26058)

Product data:

Product Type:	shRNA Plasmids
Locus ID:	26058
Synonyms:	GYF2; PARK11; PERQ2; PERQ3; TNRC15
Vector:	pRS (TR20003)
E. coli Selection:	Ampicillin
Mammalian Cell Selection:	Puromycin
Format:	Retroviral plasmids
Components:	GIGYF2 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector (Gene ID = 26058). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.
RefSeq:	<u>NM_001103146</u> , <u>NM_001103147</u> , <u>NM_001103148</u> , <u>NM_015575</u> , <u>NR_103492</u> , <u>NR_103493</u> , <u>NR_103494</u> , <u>NR_103495</u> , <u>NM_015575.1</u> , <u>NM_015575.2</u> , <u>NM_015575.3</u> , <u>NM_001103146.1</u> , <u>NM_001103147.1</u> , <u>NM_001103148.1</u> , <u>BC008072</u> , <u>BC014047</u> , <u>BC029456</u> , <u>BC043402</u> , <u>BC053684</u> , <u>BC093090</u> , <u>BC108691</u> , <u>BC136251</u> , <u>BC143352</u> , <u>BC146775</u> , <u>NM_001103147.2</u> , <u>NM_001103148.2</u> , <u>NM_001103146.3</u> , <u>NM_015575.4</u>
UniProt ID:	<u>Q6Y7W6</u>
Summary:	This gene contains CAG trinucleotide repeats and encodes a protein containing several stretches of polyglutamine residues. The encoded protein may be involved in the regulation of tyrosine kinase receptor signaling. This gene is located in a chromosomal region that was genetically linked to Parkinson disease type 11, and mutations in this gene were thought to be causative for this disease. However, more recent studies in different populations have been unable to replicate this association. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
