

# Product datasheet for TR302822

# **ODF1 Human shRNA Plasmid Kit (Locus ID 4956)**

## **Product data:**

#### **Product Type:** shRNA Plasmids **Product Name:** ODF1 Human shRNA Plasmid Kit (Locus ID 4956) Locus ID: 4956 CT133; HSPB10; ODF; ODF2; ODF27; ODFP; ODFPG; ODFPGA; ODFPGB; RT7; SODF Synonyms: pRS (TR20003) Vector: E. coli Selection: Ampicillin Mammalian Cell Puromycin Selection: Format: **Retroviral plasmids** ODF1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = **Components:** 4956). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free. NM 024410, NM 024410.1, NM 024410.2, NM 024410.3, BC104456, BC104457 RefSeq: **UniProt ID:** 014990 The outer dense fibers are cytoskeletal structures that surround the axoneme in the middle Summary: piece and principal piece of the sperm tail. The fibers function in maintaining the elastic structure and recoil of the sperm tail as well as in protecting the tail from shear forces during epididymal transport and ejaculation. Defects in the outer dense fibers lead to abnormal sperm morphology and infertility. The human outer dense fibers contains at least 10 major proteins and this gene encodes the main protein. [provided by RefSeq, Jul 2008] These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design: be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

### **ORIGENE** ODF1 Human shRNA Plasmid Kit (Locus ID 4956) – TR302822

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
