

Product datasheet for TR302956

Troduct datasfieet for TR502550

NIPA1 Human shRNA Plasmid Kit (Locus ID 123606)

Product data:

Product Type: shRNA Plasmids

Product Name: NIPA1 Human shRNA Plasmid Kit (Locus ID 123606)

Locus ID: 123606

Synonyms: FSP3; SLC57A1; SPG6

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: NIPA1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

123606). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001142275, NM 144599, NM 144599.1, NM 144599.2, NM 144599.3, NM 144599.4,

NM 001142275.1, BC025678, BC103705, BC156247, BC172484

UniProt ID: Q7RTP0

Summary: This gene encodes a magnesium transporter that associates with early endosomes and the

cell surface in a variety of neuronal and epithelial cells. This protein may play a role in nervous system development and maintenance. Multiple transcript variants encoding different isoforms have been found for this gene. Mutations in this gene have been associated with autosomal dominant spastic paraplegia 6. [provided by RefSeq, Nov 2008]

associated manuactosomia dominant spassic parapregia of [provided by Neiseq/ Nov 2006]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
