

Product datasheet for TR304085

HLAF (HLA-F) Human shRNA Plasmid Kit (Locus ID 3134)

Product data:

Product Type: shRNA Plasmids **Product Name:** HLAF (HLA-F) Human shRNA Plasmid Kit (Locus ID 3134) Locus ID: 3134 Synonyms: CDA12; HLA-5.4; HLA-CDA12; HLAF Vector: pRS (TR20003) E. coli Selection: Ampicillin Mammalian Cell Puromycin Selection: Format: **Retroviral plasmids** HLA-F - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = **Components:** 3134). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free. BC009260, NM 001098478, NM 001098479, NM 018950, NM 001098479.1, NM 001098478.1, RefSeq: NM 018950.1, NM 018950.2, BC062991, BM798587, NM 001098478.2, NM 001098479.2 **UniProt ID:** P30511 Summary: This gene belongs to the HLA class I heavy chain paralogues. It encodes a non-classical heavy chain that forms a heterodimer with a beta-2 microglobulin light chain, with the heavy chain anchored in the membrane. Unlike most other HLA heavy chains, this molecule is localized in the endoplasmic reticulum and Golgi apparatus, with a small amount present at the cell surface in some cell types. It contains a divergent peptide-binding groove, and is thought to bind a restricted subset of peptides for immune presentation. This gene exhibits few polymorphisms. Multiple transcript variants encoding different isoforms have been found for this gene. These variants lack a coding exon found in transcripts from other HLA paralogues due to an altered splice acceptor site, resulting in a shorter cytoplasmic domain. [provided by RefSeq, Jul 2008] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

GRIGENE HLAF (HLA-F) Human shRNA Plasmid Kit (Locus ID 3134) – TR304085

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
