EMR3 (ADGRE3) Human shRNA Plasmid Kit (Locus ID 84658)

Product data:

Product Type: shRNA Plasmids

Product Name: EMR3 (ADGRE3) Human shRNA Plasmid Kit (Locus ID 84658)

Locus ID: 84658 Synonyms: EMR3

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: ADGRE3 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

84658). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001289158, NM 001289159, NM 032571, NM 152939, NM 032571.1, NM 032571.2,

NM 032571.3, NM 032571.4, NM 001289159.1, NM 001289158.1, NM 152939.1, BC121130,

BC121131, BC128053, BC142639, BC148282, BC166661, NM 001289159.2

UniProt ID: Q9BY15

Summary: This gene encodes a member of the class B seven-span transmembrane (TM7) receptor

family expressed predominantly by cells of the immune system. Family members are characterized by an extended extracellular region with a variable number of N-terminal epidermal growth factor (EGF)-like domains coupled to a TM7 domain via a mucin-like spacer domain. This gene is closely linked to the gene encoding egf-like molecule containing mucin-like hormone receptor 2 on chromosome 19. This protein may play a role in myeloid-myeloid interactions during immune and inflammatory responses. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2014]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
