Product datasheet for TR305370

Claudin 1 (CLDN1) Human shRNA Plasmid Kit (Locus ID 9076)

Product data:

Product Type:	shRNA Plasmids
Product Name:	Claudin 1 (CLDN1) Human shRNA Plasmid Kit (Locus ID 9076)
Locus ID:	9076
Synonyms:	CLD1; ILVASC; SEMP1
Vector:	pRS (TR20003)
E. coli Selection:	Ampicillin
Mammalian Cell Selection:	Puromycin
Format:	Retroviral plasmids
Components:	CLDN1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = 9076). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.
RefSeq:	<u>NM 021101, NM 021101.1, NM 021101.2, NM 021101.3, NM 021101.4, BC012471, BC012471, BC012471.1</u>
UniProt ID:	<u>095832</u>
Summary:	Tight junctions represent one mode of cell-to-cell adhesion in epithelial or endothelial cell sheets, forming continuous seals around cells and serving as a physical barrier to prevent solutes and water from passing freely through the paracellular space. These junctions are comprised of sets of continuous networking strands in the outwardly facing cytoplasmic leaflet, with complementary grooves in the inwardly facing extracytoplasmic leaflet. The protein encoded by this gene, a member of the claudin family, is an integral membrane protein and a component of tight junction strands. Loss of function mutations result in neonatal ichthyosis-sclerosing cholangitis syndrome. [provided by RefSeq, Jul 2008]
shRNA Design:

Claudin 1 (CLDN1) Human shRNA Plasmid Kit (Locus ID 9076) – TR305370

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
