

Product datasheet for TR308611

Translin (TSN) Human shRNA Plasmid Kit (Locus ID 7247)

Product data:

Product Type: shRNA Plasmids **Product Name:** Translin (TSN) Human shRNA Plasmid Kit (Locus ID 7247) Locus ID: 7247 BCLF-1; C3PO; RCHF1; REHF-1; TBRBP; TRSLN Synonyms: Vector: pRS (TR20003) E. coli Selection: Ampicillin Mammalian Cell Puromycin Selection: Format: **Retroviral plasmids** TSN - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = **Components:** 7247). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free. NM 001261401, NM 004622, NR 048556, NR 048557, NR 048558, NR 048559, NM 004622.1, RefSeq: NM 004622.2, NM 001261401.1, BC002359, BC002359.1, NM 004622.3 **UniProt ID:** Q15631 Summary: This gene encodes a DNA-binding protein which specifically recognizes conserved target sequences at the breakpoint junction of chromosomal translocations. Translin polypeptides form a multimeric structure that is responsible for its DNA-binding activity. Recombinationassociated motifs and translin-binding sites are present at recombination hotspots and may serve as indicators of breakpoints in genes which are fused by translocations. These binding activities may play a crucial role in chromosomal translocation in lymphoid neoplasms. This protein encoded by this gene, when complexed with translin-associated protein X, also forms a Mg ion-dependent endoribonuclease that promotes RNA-induced silencing complex (RISC) activation. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2012] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

CRIGENE Translin (TSN) Human shRNA Plasmid Kit (Locus ID 7247) – TR308611

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
