Summary:	This locus encodes a member of the spectrin gene family. Spectrin proteins, along with ankyrin, play a role in cell membrane organization and stability. The protein encoded by this locus functions in stability of erythrocyte membranes, and mutations in this gene have been associated with spherocytosis type 2, hereditary elliptocytosis, and neonatal hemolytic anemia. Alternatively spliced transcript variants have been described. [provided by RefSeq, Nov 2009]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. # **DRIGENE**beta 1 Spectrin (SPTB) Human shRNA Plasmid Kit (Locus ID 6710) - TR309126Performance<br/>Guaranteed:OriGene guarantees that the sequences in the shRNA expression cassettes are verified to<br/>correspond to the target gene with 100% identity. One of the four constructs at minimum are<br/>guaranteed to produce 70% or more gene expression knock-down provided a minimum<br/>transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to<br/>evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly<br/>assess knockdown, the gene expression level from the included scramble control vector must<br/>be used in comparison with the target-specific shRNA transfected samples.For non-conforming shRNA, requests for replacement product must be made within ninety<br/>(90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with
