SOAT 2 (SOAT2) Human shRNA Plasmid Kit (Locus ID 8435)

Product data:

Product Type: shRNA Plasmids

Product Name: SOAT 2 (SOAT2) Human shRNA Plasmid Kit (Locus ID 8435)

Locus ID: 8435

Synonyms: ACACT2; ACAT2; ARGP2

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: SOAT2 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

8435). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 003578, NM 003578.1, NM 003578.2, NM 003578.3, BC096090, BC096091, BC096092,

BC099626, NM 003578.4

UniProt ID: <u>075908</u>

Summary: Summary: This gene is a member of a small family of acyl coenzyme A:cholesterol

acyltransferases. The gene encodes a membrane-bound enzyme localized in the

endoplasmic reticulum that produces intracellular cholesterol esters from long-chain fatty acyl CoA and cholesterol. The cholesterol esters are then stored as cytoplasmic lipid droplets inside the cell. The enzyme is implicated in cholesterol absorption in the intestine and in the assembly and secretion of apolipoprotein B-containing lipoproteins such as very low density lipoprotein (VLDL). Several alternatively spliced transcript variants of this gene have been

described, but their full-length nature is not known. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
