Semaphorin 3F (SEMA3F) Human shRNA Plasmid Kit (Locus ID 6405)

Product data:

Product Type: shRNA Plasmids

Product Name: Semaphorin 3F (SEMA3F) Human shRNA Plasmid Kit (Locus ID 6405)

Locus ID: 6405

Synonyms: SEMA-IV; SEMA4; SEMAK

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: SEMA3F - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

6405). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001318798, NM 001318800, NM 004186, NM 004186.1, NM 004186.2, NM 004186.3,

NM 004186.4, BC042914, BC042914.1

UniProt ID: Q13275

Summary: This gene encodes a member of the semaphorin III family of secreted signaling proteins that

are involved in axon guidance during neuronal development. The encoded protein contains an N-terminal Sema domain, an immunoglobulin loop and a C-terminal basic domain. This gene is expressed by the endothelial cells where it was found to act in an autocrine fashion to induce apoptosis, inhibit cell proliferation and survival, and function as an anti-tumorigenic agent. Alternative splicing results in multiple transcript variants encoding different isoforms.

[provided by RefSeq, Jan 2016]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Semaphorin 3F (SEMA3F) Human shRNA Plasmid Kit (Locus ID 6405) - TR309558

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
