

Product datasheet for TR309631

SCD1 (SCD) Human shRNA Plasmid Kit (Locus ID 6319)

Product data:

Product Type: shRNA Plasmids **Product Name:** SCD1 (SCD) Human shRNA Plasmid Kit (Locus ID 6319) Locus ID: 6319 FADS5; hSCD1; MSTP008; SCD1; SCDOS Synonyms: Vector: pRS (TR20003) E. coli Selection: Ampicillin Mammalian Cell Puromycin Selection: Format: **Retroviral plasmids Components:** SCD - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = 6319). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free. NM 005063, NM 005063.1, NM 005063.2, NM 005063.3, BC062303, BC062303.1, BC005807, RefSeq: BM546583 **UniProt ID:** 000767 Summary: This gene encodes an enzyme involved in fatty acid biosynthesis, primarily the synthesis of oleic acid. The protein belongs to the fatty acid desaturase family and is an integral membrane protein located in the endoplasmic reticulum. Transcripts of approximately 3.9 and 5.2 kb, differing only by alternative polyadenlyation signals, have been detected. A gene encoding a similar enzyme is located on chromosome 4 and a pseudogene of this gene is located on chromosome 17. [provided by RefSeq, Sep 2015] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

GRIGENE SCD1 (SCD) Human shRNA Plasmid Kit (Locus ID 6319) – TR309631

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
