### RBM5 Human shRNA Plasmid Kit (Locus ID 10181)

#### **Product data:**

**Product Type:** shRNA Plasmids

**Product Name:** RBM5 Human shRNA Plasmid Kit (Locus ID 10181)

Locus ID:

G15; H37; LUCA-15; LUCA15; RMB5 Synonyms:

pRS (TR20003) Vector:

E. coli Selection: Ampicillin Mammalian Cell

Selection:

Puromycin

Format: Retroviral plasmids

Components: RBM5 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

10181). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 005778, NR 036627, NM 005778.1, NM 005778.2, NM 005778.3, BC002957, BC156348, RefSeq:

BC157102, BM985111

UniProt ID: P52756

**Summary:** This gene is a candidate tumor suppressor gene which encodes a nuclear RNA binding

> protein that is a component of the spliceosome A complex. The encoded protein plays a role in the induction of cell cycle arrest and apoptosis through pre-mRNA splicing of multiple target genes including the tumor suppressor protein p53. This gene is located within the

tumor suppressor region 3p21.3, and may play a role in the inhibition of tumor

transformation and progression of several malignancies including lung cancer. [provided by

RefSeq, Oct 2011]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

> be certain that your variant of interest is targeted, please contact <a href="techsupport@origene.com">techsupport@origene.com</a>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
