LCN1 Human shRNA Plasmid Kit (Locus ID 3933)

Product data:

Product Type: shRNA Plasmids

Product Name: LCN1 Human shRNA Plasmid Kit (Locus ID 3933)

Locus ID: 3933

Synonyms: PMFA; TLC; TP; VEGP

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection: Format:

Retroviral plasmids

Components: LCN1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

3933). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001252617, NM 001252618, NM 001252619, NM 002297, NM 002297.1, NM 002297.2,

NM 002297.3, NM 001252619.1, NM 001252618.1, BC065721, BC065721.1, BC074925,

BC074926, NM 001252618.2, NM 001252619.2, NM 002297.4, NM 001252617.2

UniProt ID: P31025

Summary: This gene encodes a member of the lipocalin family of small secretory proteins. Lipocalins are

extracellular transport proteins that bind to a variety of hydrophobic ligands. The encoded protein is the primary lipid binding protein in tears and is overproduced in response to multiple stimuli including infection and stress. The encoded protein may be a marker for chromosome aneuploidy as well as an autoantigen in Sjogren's syndrome. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene, and two pseudogenes of this gene are also located on the long arm of chromosome 9. [provided

by RefSeq, Nov 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
