

Product datasheet for TR311988

KEL Human shRNA Plasmid Kit (Locus ID 3792)

Product data:

Product Type: shRNA Plasmids

Product Name: KEL Human shRNA Plasmid Kit (Locus ID 3792)

Locus ID: 3792

Synonyms: CD238; ECE3; Kell

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycir

Selection:

Puromycin

Format: Retroviral plasmids

Components: KEL - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

3792). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 000420, NM 000420.1, NM 000420.2, BC003135, BC003135.1, BC050639, NM 000420.3

UniProt ID: P23276

Summary: This gene encodes a type II transmembrane glycoprotein that is the highly polymorphic Kell

blood group antigen. The Kell glycoprotein links via a single disulfide bond to the XK

membrane protein that carries the Kx antigen. The encoded protein contains sequence and structural similarity to members of the neprilysin (M13) family of zinc endopeptidases.

[provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact $\underline{\mathsf{techsupport}} \underline{\mathsf{origene.com}}.$

If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
