## **GABPA Human shRNA Plasmid Kit (Locus ID 2551)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** GABPA Human shRNA Plasmid Kit (Locus ID 2551)

Locus ID: 2551

Synonyms: E4TF1-60; E4TF1A; NFT2; NRF2A; RCH04A07

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: GABPA - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

2551). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001197297, NM 002040, NM 002040.1, NM 002040.2, NM 002040.3, NM 001197297.1,

BC035031, BC035031.2, NM 001197297.2, NM 002040.4

UniProt ID: Q06546

Summary: This gene encodes one of three GA-binding protein transcription factor subunits which

functions as a DNA-binding subunit. Since this subunit shares identity with a subunit

encoding the nuclear respiratory factor 2 gene, it is likely involved in activation of cytochrome oxidase expression and nuclear control of mitochondrial function. This subunit also shares identity with a subunit constituting the transcription factor E4TF1, responsible for expression of the adenovirus E4 gene. Because of its chromosomal localization and ability to form heterodimers with other polypeptides, this gene may play a role in the Down Syndrome

phenotype. Two transcript variants encoding the same protein have been found for this gene.

[provided by RefSeq, Oct 2010]

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
