Filamin A (FLNA) Human shRNA Plasmid Kit (Locus ID 2316)

Product data:

Product Type: shRNA Plasmids

Product Name: Filamin A (FLNA) Human shRNA Plasmid Kit (Locus ID 2316)

Locus ID: 2316

Synonyms: ABP-280; ABPX; CSBS; CVD1; FGS2; FLN; FLN-A; FLN1; FMD; MNS; NHBP; OPD; OPD1; OPD2;

XLVD; XMVD

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection: Format:

Retroviral plasmids

Components: FLNA - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

2316). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: <u>BC014654, NM 001110556, NM 001456.1, NM 001456.2, NM 001456.2, NM 001456.3,</u>

NM 001110556.1, BC014654.1, BC028089, BC041179, BC067111, BC109289, NM 001110556.2

UniProt ID: P21333

Summary: The protein encoded by this gene is an actin-binding protein that crosslinks actin filaments

and links actin filaments to membrane glycoproteins. The encoded protein is involved in remodeling the cytoskeleton to effect changes in cell shape and migration. This protein interacts with integrins, transmembrane receptor complexes, and second messengers. Defects in this gene are a cause of several syndromes, including periventricular nodular heterotopias (PVNH1, PVNH4), otopalatodigital syndromes (OPD1, OPD2), frontometaphyseal

dysplasia (FMD), Melnick-Needles syndrome (MNS), and X-linked congenital idiopathic

intestinal pseudoobstruction (CIIPX). Two transcript variants encoding different isoforms have

been found for this gene.[provided by RefSeq, Mar 2009]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
