

## Product datasheet for TR313009

## FDPS Human shRNA Plasmid Kit (Locus ID 2224)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** FDPS Human shRNA Plasmid Kit (Locus ID 2224)

Locus ID: 2224

FPPS; FPS; POROK9 Synonyms:

Vector: pRS (TR20003)

E. coli Selection: Ampicillin Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

FDPS - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

2224). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 001135821, NM 001135822, NM 001242824, NM 001242825, NM 002004, NM 002004.1, RefSeq:

> NM 002004.2, NM 002004.3, NM 001135822.1, NM 001135821.1, NM 001242825.1, NM 001242824.1, BC010004, NM 001135821.2, NM 001242824.2, NM 002004.4

**UniProt ID:** P14324

Summary: This gene encodes an enzyme that catalyzes the production of geranyl pyrophosphate and

> farnesyl pyrophosphate from isopentenyl pyrophosphate and dimethylallyl pyrophosphate. The resulting product, farnesyl pyrophosphate, is a key intermediate in cholesterol and sterol biosynthesis, a substrate for protein farnesylation and geranylgeranylation, and a ligand or agonist for certain hormone receptors and growth receptors. Drugs that inhibit this enzyme prevent the post-translational modifications of small GTPases and have been used to treat

diseases related to bone resorption. Multiple pseudogenes have been found on

chromosomes 1, 7, 14, 15, 21 and X. Multiple transcript variants encoding different isoforms

have been found for this gene.[provided by RefSeq, Oct 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
