FBXL4 Human shRNA Plasmid Kit (Locus ID 26235)

Product data:

Product Type: shRNA Plasmids

Product Name: FBXL4 Human shRNA Plasmid Kit (Locus ID 26235)

Locus ID: 26235

Synonyms: FBL4; FBL5; MTDPS13

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: FBXL4 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

26235). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 001278716, NM 012160, NR 103836, NR 103837, NM 012160.1, NM 012160.2,

NM 012160.3, NM 012160.4, NM 001278716.1, BC055010, BC055010.1, BC032641, BC039819,

BC091484, NM 001278716.2

UniProt ID: Q9UKA2

Summary: This gene encodes a member of the F-box protein family, which are characterized by an

approximately 40 amino acid motif, the F-box. F-box proteins constitute one subunit of

modular E3 ubiquitin ligase complexes, called SCF complexes, which function in

phosphorylation-dependent ubiquitination. The F-box domain mediates protein-protein interactions and binds directly to S-phase kinase-associated protein 1. In addition to an F-box domain, the encoded protein contains at least 9 tandem leucine-rich repeats. The ubiquitin ligase complex containing the encoded protein may function in cell-cycle control by regulating levels of lysine-specific demethylase 4A. Alternative splicing results in multiple transcript

variants. [provided by RefSeq, Jul 2013]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
