

## Product datasheet for TR313573

## **DAB2 Human shRNA Plasmid Kit (Locus ID 1601)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** DAB2 Human shRNA Plasmid Kit (Locus ID 1601)

Locus ID: 1601

DOC-2; DOC2 Synonyms: Vector: pRS (TR20003)

E. coli Selection: **Ampicillin** Mammalian Cell Puromycin

Selection: Format:

Retroviral plasmids

DAB2 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

1601). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 001244871, NM 001343, NM 001343.1, NM 001343.2, NM 001343.3, NM 001244871.1, RefSeq:

BC003064, BC003064.2, NM 001343.4

UniProt ID: P98082

**Summary:** This gene encodes a mitogen-responsive phosphoprotein. It is expressed in normal ovarian

> epithelial cells, but is down-regulated or absent from ovarian carcinoma cell lines, suggesting its role as a tumor suppressor. This protein binds to the SH3 domains of GRB2, an adaptor protein that couples tyrosine kinase receptors to SOS (a guanine nucleotide exchange factor for Ras), via its C-terminal proline-rich sequences, and may thus modulate growth factor/Ras pathways by competing with SOS for binding to GRB2. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2011]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

> be certain that your variant of interest is targeted, please contact <a href="techsupport@origene.com">techsupport@origene.com</a>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
