## Corticotropin Releasing Factor Receptor 2 (CRHR2) Human shRNA Plasmid Kit (Locus ID 1395)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Corticotropin Releasing Factor Receptor 2 (CRHR2) Human shRNA Plasmid Kit (Locus ID 1395)

Locus ID: 1395

Synonyms: CRF-RB; CRF2; CRFR2; HM-CRF

Vector: pRS (TR20003)

E. coli Selection: **Ampicillin Mammalian Cell** 

Selection:

Puromycin

Format: Retroviral plasmids

CRHR2 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

1395). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 001202475, NM 001202481, NM 001202482, NM 001202483, NM 001883, NM 001883.1, RefSeq:

NM 001883.2, NM 001883.3, NM 001883.4, NM 001202483.1, NM 001202481.1,

NM 001202482.1, NM 001202475.1, BC096830, NM 001883.5

**UniProt ID:** Q13324

**Summary:** The protein encoded by this gene belongs to the G-protein coupled receptor 2 family, and the

subfamily of corticotropin releasing hormone receptor. This receptor shows high affinity for

corticotropin releasing hormone (CRH), and also binds CRH-related peptides such as urocortin. CRH is synthesized in the hypothalamus, and plays an important role in coordinating the endocrine, autonomic, and behavioral responses to stress and immune

challenge. Studies in mice suggest that this receptor maybe involved in mediating cardiovascular homeostasis. Alternatively spliced transcript variants encoding different

isoforms have been described for this gene. [provided by RefSeq, Jan 2011]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

> be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

# Corticotropin Releasing Factor Receptor 2 (CRHR2) Human shRNA Plasmid Kit (Locus ID 1395) – TR313733

### Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
