

# Product datasheet for TR313845

# CLSTN1 Human shRNA Plasmid Kit (Locus ID 22883)

## **Product data:**

#### **Product Type:** shRNA Plasmids **Product Name:** CLSTN1 Human shRNA Plasmid Kit (Locus ID 22883) Locus ID: 22883 ALC-ALPHA; alcalpha1; alcalpha2; CDHR12; CST-1; CSTN1; PIK3CD; XB31alpha Synonyms: pRS (TR20003) Vector: E. coli Selection: Ampicillin Mammalian Cell Puromycin Selection: Format: **Retroviral plasmids** CLSTN1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = **Components:** 22883). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free. NM 001009566, NM 001302883, NM 014944, NM 014944.1, NM 014944.2, NM 014944.3, RefSeq: NM 001009566.1, NM 001009566.2, NM 001302883.1, BC033902, NM 001009566.3 **UniProt ID:** 094985 Summary: This gene is a member of the calsyntenin family, a subset of the cadherin superfamily. The encoded transmembrane protein, also known as alcadein-alpha, is thought to bind to kinesin-1 motors to mediate the axonal anterograde transport of certain types of vesicle. Amyloid precursor protein (APP) is trafficked via these vesicles and so this protein is being investigated to see how it might contribute to the mechanisms underlying Alzheimer's disease. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Nov 20141 These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design: be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### CLSTN1 Human shRNA Plasmid Kit (Locus ID 22883) – TR313845

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
