CLC7 (CLCN7) Human shRNA Plasmid Kit (Locus ID 1186)

Product data:

Product Type: shRNA Plasmids

Product Name: CLC7 (CLCN7) Human shRNA Plasmid Kit (Locus ID 1186)

Locus ID:

CLC-7; CLC7; HOD; OPTA2; OPTB4; PPP1R63 Synonyms:

pRS (TR20003) Vector:

E. coli Selection: Ampicillin Mammalian Cell

Selection:

Puromycin

Format: Retroviral plasmids

CLCN7 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

1186). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 001114331, NM 001287, NM 001287.1, NM 001287.2, NM 001287.3, NM 001287.4, RefSeq:

NM 001287.5, NM 001114331.1, NM 001114331.2, BC012737, BC004946, BC006158,

BC015235, BC109196, NM 001287.6

UniProt ID: P51798

Summary: The product of this gene belongs to the CLC chloride channel family of proteins. Chloride

> channels play important roles in the plasma membrane and in intracellular organelles. This gene encodes chloride channel 7. Defects in this gene are the cause of osteopetrosis

autosomal recessive type 4 (OPTB4), also called infantile malignant osteopetrosis type 2 as well as the cause of autosomal dominant osteopetrosis type 2 (OPTA2), also called autosomal dominant Albers-Schonberg disease or marble disease autosoml dominant. Osteopetrosis is a rare genetic disease characterized by abnormally dense bone, due to defective resorption

of immature bone. OPTA2 is the most common form of osteopetrosis, occurring in

adolescence or adulthood. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
