| Product Type:                | shRNA Plasmids  |
|------------------------------|---|
| Product Name:                | ARHGEF10 Human shRNA Plasmid Kit (Locus ID 9639)  |
| Locus ID:                    | 9639  |
| Synonyms:                    | GEF10; SNCV   |
| Vector:                      | pRS (TR20003)   |
| E. coli Selection:           | Ampicillin  |
| Mammalian Cell<br>Selection: | Puromycin   |
| Format:                      | Retroviral plasmids   |
| Components:                  | ARHGEF10 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID<br>= 9639). 5µg purified plasmid DNA per construct<br>29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.  |
| RefSeq:                      | <u>NM_001308152, NM_001308153, NM_014629, NM_014629.1, NM_014629.2, NM_014629.3, BC026965, BC036809, BC040474, BC112926, NM_014629.4</u>  |
| UniProt ID:                  | <u>015013</u>   |
| Summary:                     | This gene encodes a Rho guanine nucleotide exchange factor (GEF). Rho GEFs regulate the<br>activity of small Rho GTPases by stimulating the exchange of guanine diphosphate (GDP) for<br>guanine triphosphate (GTP) and may play a role in neural morphogenesis. Mutations in this<br>gene are associated with slowed nerve conduction velocity (SNCV). Alternative splicing results<br>in multiple transcript variants. [provided by RefSeq, Apr 2015] |
| shRNA Design:                | These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> .<br>If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### **GRIGENE** ARHGEF10 Human shRNA Plasmid Kit (Locus ID 9639) – TR314677

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
