

Product datasheet for TR314923

ADK Human shRNA Plasmid Kit (Locus ID 132)

Product data:

Product Type: shRNA Plasmids

Product Name: ADK Human shRNA Plasmid Kit (Locus ID 132)

Locus ID: 132 ΑK Synonyms:

Vector: pRS (TR20003)

E. coli Selection: **Ampicillin** Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: ADK - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

132). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

UniProt ID: P55263

Summary: This gene an enzyme which catalyzes the transfer of the gamma-phosphate from ATP to

adenosine, thereby serving as a regulator of concentrations of both extracellular adenosine

and intracellular adenine nucleotides. Adenosine has widespread effects on the

cardiovascular, nervous, respiratory, and immune systems and inhibitors of the enzyme could play an important pharmacological role in increasing intravascular adenosine

concentrations and acting as anti-inflammatory agents. Multiple transcript variants encoding

different isoforms have been found for this gene. [provided by RefSeq, Jan 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
